# 1. Introduction

This document provides the wiring details for the cables used to connect Cornet digital servo drives with the end-user application. The servo drive-side pinouts are provided in Chapter 3 of the drive’s installation guide.

The cables come in two lengths: 2 meters (6 ½ feet) and 5 meters (16 ½ feet). The cable length is indicated in the cable part number by use of an extended suffix to indicate 5 meter length. For example, cable CBL-DAUX is a 2 meter cable while CBL-DAUX-5 is a 5 meter cable.

CBL-RJ45CAN2, is an exception, it is only 20 cm long.

## 2. Cable Kits

Several Cable Kits can be purchased from Elmo. Each contain a set of 8 cables. The -5 suffix on the kits and on the cables (CBL-DFDBK-5 for example) indicate that the cables are 5m long. Cables and kits without that suffix are 2m long (except for CBL-RJ45CAN2 which is 20cm long). **Customers may purchase cables in kits, or individually in multiples of 10 each.** The contents of the kits are listed below:
